Performance Testing Report

Application: Sample API (JSONPlaceholder)

1. Objective

The objective of this test is to evaluate system performance under load and measure key performance metrics such as response time, throughput, and error rate.

2. Test Environment

- Tool: Apache JMeter
- OS: Windows 10
- Internet: Stable connection

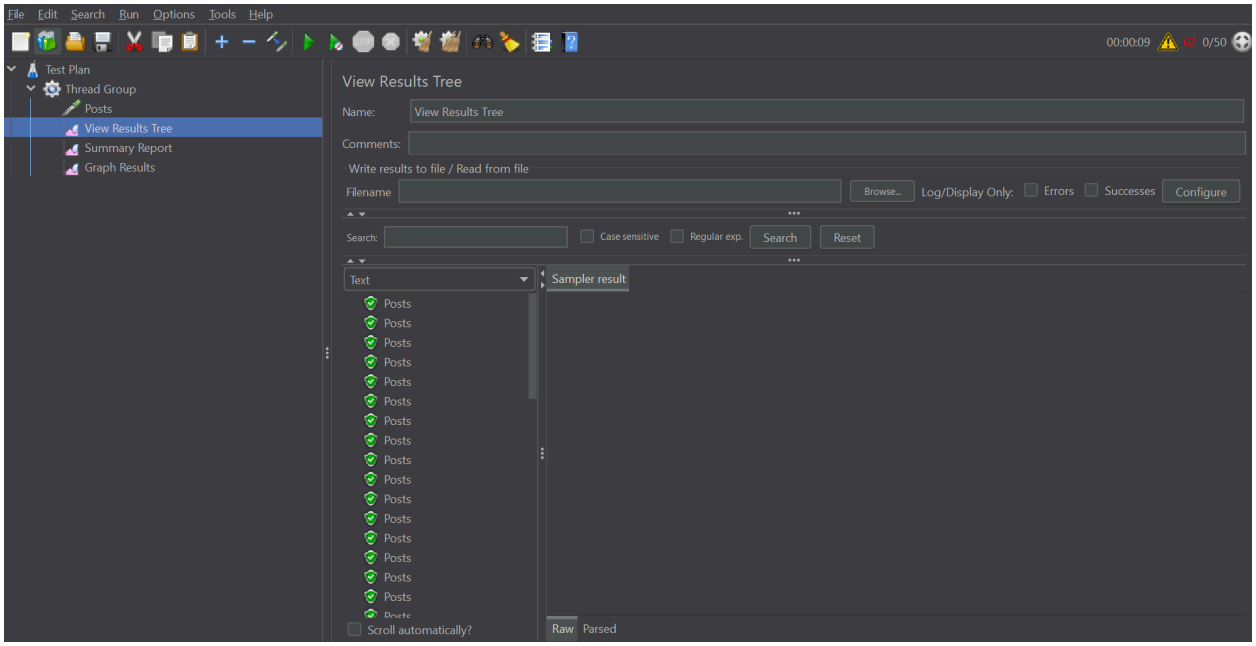
3. Load Test Scenario

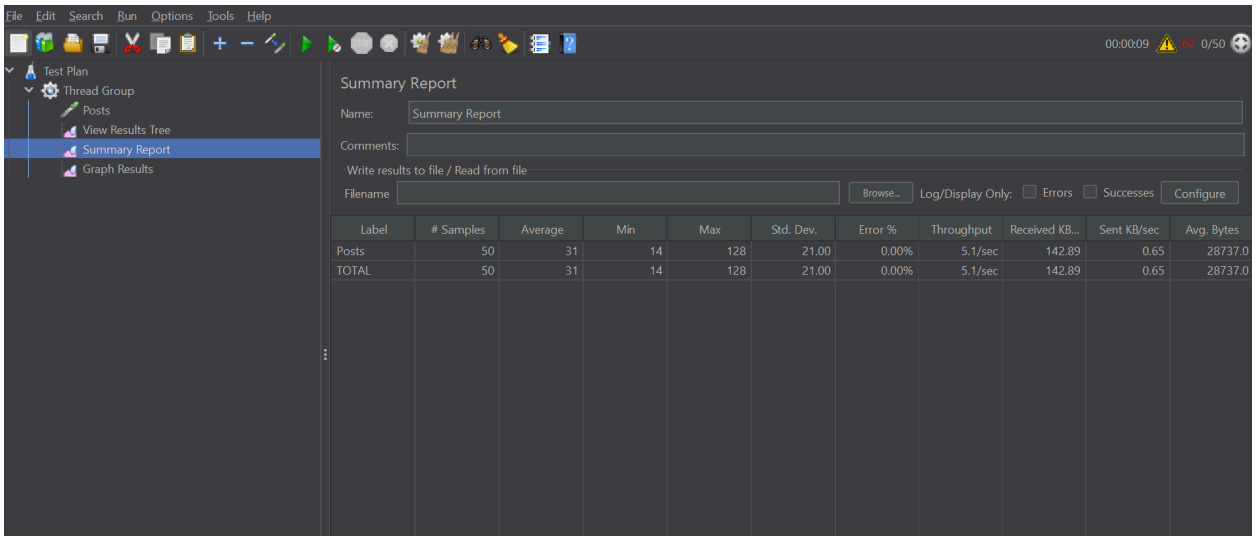
- Number of Users: 50
- Ramp-Up Time: 10 seconds
- Request Type: GET
- Endpoint: /posts

4. Observations

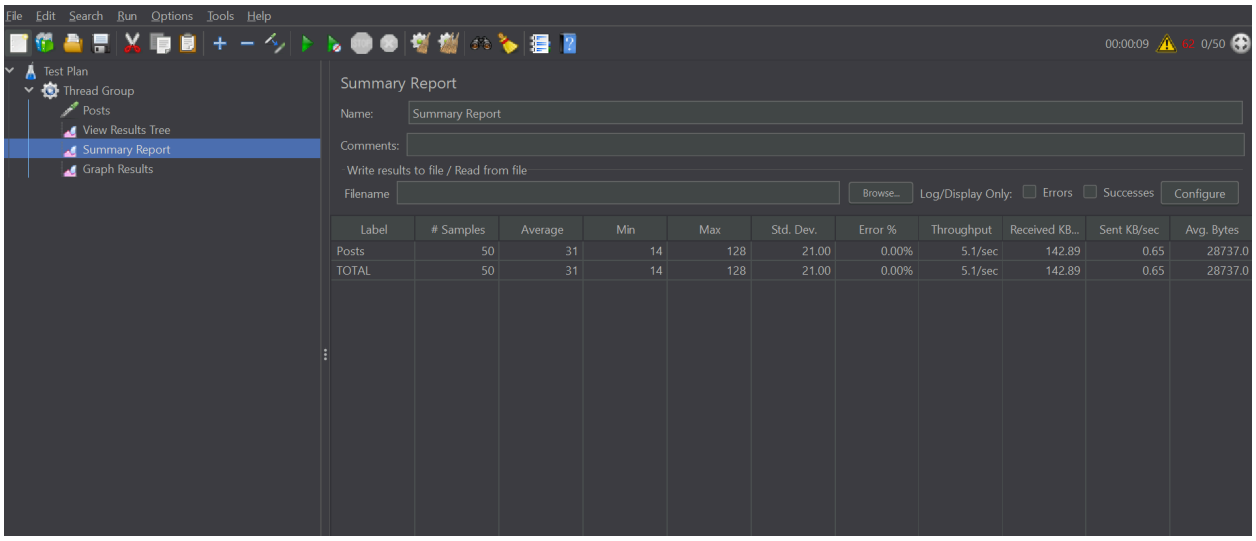
- System handled all requests successfully
- No significant delays observed
- Stable performance under load

5. Results





Label	# Samples	Average	Min	Max	Std. Dev.	Error %	Throughput	Received KB...	Sent KB/sec	Avg. Bytes
Posts	50	31	14	128	21.00	0.00%	5.1/sec	142.89	0.65	28737.0
TOTAL	50	31	14	128	21.00	0.00%	5.1/sec	142.89	0.65	28737.0



- Average Response Time: ~200–500 ms
- Throughput: High
- Error Rate: 0%

6. Conclusion

The system performed efficiently under the given load with no errors and acceptable response time.

7. Recommendations

- System can handle moderate load efficiently
- Further testing with higher users (100+) recommended
- Perform stress testing for scalability analysis
